area of 6.5 m2 and two parking spaces. It is located in an energy efficient building of five luxury apartments. The feature is quality construction and the use of quality elements. The building is designed to have large glass surfaces and lots of light in the interior. The system of sliding façade panel sunshades enables selective protection from the sun when it is needed, without closing the views of the sea. For heating and cooling, instead of the classic air conditioners, the building uses a professional fan-coil system and floor fan coil units driven by an air heat pump, a central vacuum cleaner with an engine room in the basement (vacuuming without noise and dust).
